

# Contents

<b>Preface</b>	<b>xvii</b>
<b>1 Preliminaries</b>	<b>1</b>
1.1 Procedures . . . . .	1
1.2 Linux Distributions . . . . .	2
1.3 Standards and the <b>LSB</b> . . . . .	3
<b>2 Compilers</b>	<b>5</b>
2.1 GCC . . . . .	5
2.2 Major gcc Options . . . . .	6
2.3 Preprocessor . . . . .	8
2.4 Other Languages . . . . .	9
2.5 Integrated Development Environments (IDE) . . . . .	9
2.6 Labs . . . . .	12
<b>3 Libraries</b>	<b>13</b>
3.1 Static Libraries . . . . .	13
3.2 Shared Libraries . . . . .	14
3.3 Linking To Libraries . . . . .	16
3.4 Dynamic Linking Loader . . . . .	17
3.5 Labs . . . . .	19
<b>4 Make</b>	<b>21</b>
4.1 Using make and Makefiles . . . . .	21
4.2 Building large projects . . . . .	22
4.3 More complicated rules . . . . .	23
4.4 Built-in rules . . . . .	25
4.5 Labs . . . . .	26
<b>5 Source Control</b>	<b>27</b>
5.1 Source Control . . . . .	27

5.2	RCS and CVS	28
5.3	Subversion	29
5.4	git	30
5.5	Labs	31
<b>6</b>	<b>Debugging</b>	<b>35</b>
6.1	gdb (ddd, kdbg, Insight)	35
6.2	Electric Fence	36
6.3	Getting the Time	37
6.4	Profiling and Performance	37
6.5	valgrind	39
6.6	Labs	42
<b>7</b>	<b>System Calls</b>	<b>45</b>
7.1	System Calls vs. Library Functions	45
7.2	How System Calls are Made	46
7.3	Return Values and Error Numbers	46
7.4	Labs	47
<b>8</b>	<b>Memory Management and Allocation</b>	<b>49</b>
8.1	Memory Management	49
8.2	Dynamical Allocation	50
8.3	Tuning <code>malloc()</code>	52
8.4	Labs	53
<b>9</b>	<b>Files and Filesystems in Linux</b>	<b>55</b>
9.1	Files, Directories and Devices	55
9.2	The Virtual File System	57
9.3	The ext2/ext3 Filesystem	58
9.4	Journalling Filesystems	59
9.5	The ext4/ Filesystem	60
9.6	Labs	61
<b>10</b>	<b>File I/O</b>	<b>63</b>
10.1	Unix File I/O	63
10.2	Opening and Closing	64
10.3	Reading, Writing and Seeking	66
10.4	Positional and Vector I/O	68

10.5 Standard I/O Library . . . . .	69
10.6 Large File Support (LFS) . . . . .	70
10.7 Labs . . . . .	71
<b>11 Advanced File Operations</b>	<b>73</b>
11.1 Stat Functions . . . . .	73
11.2 Directory Functions . . . . .	76
11.3 Inotify . . . . .	77
11.4 Memory Mapping . . . . .	79
11.5 <b>flock()</b> and <b>fcntl()</b> . . . . .	80
11.6 Making Temporary Files . . . . .	83
11.7 Other System Calls . . . . .	84
11.8 Labs . . . . .	87
<b>12 Processes - I</b>	<b>89</b>
12.1 What is a Process? . . . . .	89
12.2 Process Limits . . . . .	90
12.3 Process Groups . . . . .	94
12.4 The <b>proc</b> Filesystem . . . . .	94
12.5 Inter-Process Communication Methods . . . . .	95
12.6 Labs . . . . .	97
<b>13 Processes - II</b>	<b>99</b>
13.1 Using <b>system()</b> to Create a Process . . . . .	99
13.2 Using <b>fork()</b> to Create a Process . . . . .	100
13.3 Using <b>exec()</b> to Create a Process . . . . .	101
13.4 Using <b>clone()</b> . . . . .	102
13.5 Exiting . . . . .	104
13.6 Constructors and Destructors . . . . .	105
13.7 Waiting . . . . .	105
13.8 Daemon Processes . . . . .	106
13.9 Labs . . . . .	107
<b>14 Pipes and Fifos</b>	<b>109</b>
14.1 Pipes and Inter-Process Communication . . . . .	109
14.2 <b>popen()</b> and <b>pclose()</b> . . . . .	110
14.3 <b>pipe()</b> . . . . .	111
14.4 Named Pipes (FIFOs) . . . . .	113

14.5	<b>splice()</b> , <b>vmsplice()</b> and <b>tee()</b>	114
14.6	Labs	116
<b>15</b>	<b>Asynchronous I/O</b>	<b>117</b>
15.1	What is Asynchronous I/O?	117
15.2	The Posix Asynchronous I/O API	118
15.3	Linux Implementation	119
15.4	Labs	122
<b>16</b>	<b>Signals - I</b>	<b>123</b>
16.1	What are Signals?	123
16.2	Signals Available	124
16.3	Dispatching Signals	125
16.4	Alarms, Pausing and Sleeping	126
16.5	Setting up a Signal Handler	127
16.6	Signal Sets	129
16.7	<b>sigaction()</b>	131
16.8	Labs	133
<b>17</b>	<b>Signals - II</b>	<b>135</b>
17.1	Reentrancy and Signal Handlers	135
17.2	Jumping and Non-Local Returns	136
17.3	<b>siginfo</b> and <b>sigqueue()</b>	138
17.4	Real Time Signals	139
17.5	Labs	140
<b>18</b>	<b>POSIX Threads - I</b>	<b>141</b>
18.1	Multi-threading under Linux	141
18.2	Basic Program Structure	142
18.3	Creating and Destroying Threads	142
18.4	Signals and Threads	145
18.5	Forking vs. Threading	146
18.6	Labs	147
<b>19</b>	<b>POSIX Threads - II</b>	<b>149</b>
19.1	Deadlocks and Race Conditions	149
19.2	Mutex Operations	150
19.3	Semaphores	151

19.4	Futexes	152
19.5	Conditional Operations	152
19.6	Labs	154
<b>20</b>	<b>Networking and Sockets</b>	<b>155</b>
20.1	Networking Layers	155
20.2	What are Sockets?	158
20.3	Stream Sockets	159
20.4	Datagram Sockets	159
20.5	Raw Sockets	160
20.6	Byte Ordering	160
20.7	Labs	161
<b>21</b>	<b>Sockets - Addresses and Hosts</b>	<b>163</b>
21.1	Socket Address Structures	163
21.2	Converting IP Addresses	165
21.3	Host Information	166
21.4	Labs	168
<b>22</b>	<b>Sockets - Ports and Protocols</b>	<b>171</b>
22.1	Service Port Information	171
22.2	Protocol Information	173
22.3	Labs	174
<b>23</b>	<b>Sockets - Clients</b>	<b>177</b>
23.1	Basic Client Sequence	177
23.2	<code>socket()</code>	178
23.3	<code>connect()</code>	181
23.4	<code>close()</code> and <code>shutdown()</code>	182
23.5	Unix Client	184
23.6	Internet Client	184
23.7	Labs	186
<b>24</b>	<b>Sockets - Servers</b>	<b>187</b>
24.1	Basic Server Sequence	187
24.2	<code>bind()</code>	189
24.3	<code>listen()</code>	191
24.4	<code>accept()</code>	192
24.5	Unix Server	193
24.6	Internet Server	194

24.7 Labs . . . . .	195
<b>25 Sockets - Input/Output Operations</b>	<b>197</b>
25.1 <code>write()</code> , <code>read()</code> . . . . .	197
25.2 <code>send()</code> , <code>recv()</code> . . . . .	199
25.3 <code>sendto()</code> , <code>recvfrom()</code> . . . . .	200
25.4 <code>sendmsg()</code> , <code>recvmsg()</code> . . . . .	201
25.5 <code>sendfile()</code> . . . . .	203
25.6 <code>socketpair()</code> . . . . .	204
25.7 Labs . . . . .	204
<b>26 Sockets - Options</b>	<b>207</b>
26.1 Getting and Setting Socket Options . . . . .	207
26.2 <code>fcntl()</code> . . . . .	208
26.3 <code>ioctl()</code> . . . . .	209
26.4 <code>getsockopt()</code> and <code>setsockopt()</code> . . . . .	209
26.5 Labs . . . . .	211
<b>27 Netlink Sockets</b>	<b>213</b>
27.1 What are netlink Sockets? . . . . .	213
27.2 Opening a netlink Socket . . . . .	214
27.3 netlink Messages . . . . .	215
27.4 Labs . . . . .	217
<b>28 Sockets - Multiplexing and Concurrent Servers</b>	<b>219</b>
28.1 Multiplexed and Asynchronous Socket I/O . . . . .	220
28.2 <code>select()</code> . . . . .	220
28.3 <code>poll()</code> . . . . .	223
28.4 <code>pselect()</code> and <code>ppoll()</code> . . . . .	225
28.5 <code>epoll</code> . . . . .	225
28.6 Signal Driven and Asynchronous I/O . . . . .	227
28.7 Concurrent Servers . . . . .	228
28.8 Labs . . . . .	229
<b>29 Inter Process Communication</b>	<b>233</b>
29.1 Methods of IPC . . . . .	233
29.2 System V IPC . . . . .	234
29.3 Posix IPC . . . . .	237

29.4 Labs . . . . .	238
<b>30 Shared Memory</b>	<b>241</b>
30.1 What is Shared Memory? . . . . .	241
30.2 System V Shared Memory . . . . .	242
30.3 POSIX Shared Memory . . . . .	244
30.4 Labs . . . . .	246
<b>31 Semaphores</b>	<b>247</b>
31.1 What is a Semaphore? . . . . .	247
31.2 System V Semaphores . . . . .	248
31.3 POSIX Semaphores . . . . .	251
31.4 Labs . . . . .	253
<b>32 Message Queues</b>	<b>255</b>
32.1 What are Message Queues? . . . . .	255
32.2 System V Message Queues . . . . .	256
32.3 POSIX Message Queues . . . . .	259
32.4 Labs . . . . .	262
